Allowable Subject Matter

The following is an examiner's statement of reasons for allowance: The prior art fails to disclose or render obvious the claimed combination including a regeneration determining unit defines a first characteristic line, which is a straight line passing an initial point in which the accumulation amount ML is zero, and a second characteristic line, which is a straight line having a smaller slope value compared with a slope of the first characteristic line; the accumulation characteristic is defined by the first characteristic line and the second characteristic line; the pressure drop increases along with the first characteristic line from the initial point to a predetermined increasing transitional point, and increases along with the second characteristic line from the increasing transitional point; the regeneration determining unit calculates the accumulation amount ML based on the accumulation characteristic and an operating condition of the internal combustion engine which includes at least the pressure drop; and the regeneration determining unit determines whether the accumulation amount ML exceeds a predetermined regeneration-starting amount ML_{th} for determining whether the regeneration of the particulate filter needs to be performed; and a correcting unit that corrects the accumulation characteristic so that the second characteristic line is substantially parallelly shifted to a direction, in which the accumulation amount ML becomes large when the particles are in the combusting condition.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Prior Art

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure and consists of six patents:

Hirota et al. (Pat. No. 6568178), Kammel (Pat. No. 5121601), Kumagai (Pat. No. 6090187), Nakatani et al. (Pat. No. 6820418), Hough et al. (Pat. No. 5063736), and Shinzawa et al. (Pat. No. 5195316) all disclose an exhaust gas purification for use with an internal combustion engine.
